

How Genie improves testing after the Workday 31 upgrade

What's the issue?

As part of the **Workday 31 upgrade**, the Area Code field has been decommissioned. Now that the field will not be displayed on pages, any Integrations that refer to Area Code field will need retrofitting.

Genie's solution

Integration module testing built in Genie addresses the issue by checking the Area Code field for blank values. If Area Code is marked as a required field in Genie, the framework ensures that every record has a value associated with Area Code, thus saving customers from the mundane manual task of checking every field.

Meet or exceed deadlines with a top-quality system that is always on-time and on-budget!

With Genie, you can:

- + Execute multiple test scenarios quickly and in a single run
- + Improve the accuracy and quality of each test run
- + Provide dashboards to track testing progress
- + Make status reporting easy and assists in auditing purposes
- + Meet or exceed testing deadlines to ensure on-time and on-budget implementation
- + Receive ongoing automated testing tool support during and after-testing
